CAREER SUMMARY

Full-Stack Engineer (backend-focused) with 4+ years shipping production web apps with Node.js/NestJS, TypeScript and PostgreSQL, now building LLM-powered products end to end in Python. I own features from problem definition to shipped, tested and measured: most recently EDGAR Analyst, a RAG system over SEC filings with citation-grounded answers, a refusal guardrail, a hand-labeled eval set and per-query latency, token and cost logging. Production track record of cutting API response times (~35%) and load times (~25%). Looking for an ownership role in a small team where data and user feedback decide what ships next.

TECHNICAL SKILLS

AI / LLM: Anthropic Claude API, OpenRouter, RAG, embeddings (sentence-transformers), vector search (ChromaDB, pgvector), SSE streaming, structured outputs (Pydantic), prompt versioning, LLM evaluation, guardrails, cost & latency tracking
Backend: Node.js, NestJS, TypeScript, Python, FastAPI, PostgreSQL, MongoDB, MySQL, GraphQL, REST, Prisma, Redis, BullMQ
Frontend: React, Next.js, Angular
Quality & Ops: pytest, eval harnesses, structured logging, code reviews, Docker, AWS (EC2, S3), NGINX, DigitalOcean, Git
AI-assisted delivery: Claude Code with a spec-driven workflow (feature spec → implement → audit → test gates)

FEATURED PROJECT — END-TO-END OWNERSHIP

EDGAR Analyst | github.com/ArielBailon/edgar-analyst — Sep. 2026

Grounded Q&A over SEC filings and earnings calls — solo build, working MVP shipped in one week

- Owned the full lifecycle: problem definition, architecture, implementation, testing, evaluation and documentation of trade-offs.
- Built a RAG pipeline over SEC EDGAR 10-K/10-Q filings and earnings-call transcripts: section-aware chunking (~2,400 cited chunks), semantic search with ChromaDB and answers from Claude Haiku 4.5 citing the exact filing and section.
- Added a pre-LLM refusal guardrail (no answer without supporting evidence, $0 cost for off-topic questions) and an eval harness of 22 hand-labeled Q&A pairs scoring citation accuracy and answer relevance.
- Instrumented per-query logging of latency, tokens and cost (~2 s median, ~$0.002 per answer), backed by 122 deterministic pytest tests.

Technologies: Python, Anthropic API, ChromaDB, sentence-transformers, Pydantic, pytest

CAREER HISTORY

ULTAHOST, United States — Aug. 2025 – Oct. 2025

Backend Developer

- Designed and implemented scalable backend APIs with NestJS and TypeScript, improving response times by ~35% through query optimization and caching.
- Built and maintained RESTful and GraphQL services integrated with internal and third-party systems.
- Implemented microservices architecture to support high-availability systems with MySQL.

Technologies: NestJS, TypeScript, MySQL, GraphQL

Freelance & Independent Development — Feb. 2024 – Present

Backend / AI Engineer — personal products and continuous learning

- **nextgen-app:** Automated short-form video platform (NestJS, BullMQ, Prisma, PostgreSQL, Redis): LLM story generation via OpenRouter, text-to-speech, synced subtitles, 9:16 rendering and scheduled auto-publishing to TikTok and YouTube, with slow LLM/TTS/render steps isolated in BullMQ queues.
- **CodeSage:** FastAPI microservice that streams structured LLM code analysis over SSE, with Pydantic-validated output, rate limiting, exponential-backoff retries, per-request cost tracking and versioned prompts; 74 automated tests. Now adding RAG with pgvector.
- **AI Engineering upskilling:** Following a structured roadmap (Python, LLM fundamentals, RAG, agents, evals and observability), applied hands-on through EDGAR Analyst and CodeSage.

Technologies: NestJS, TypeScript, Python, FastAPI, BullMQ, Prisma, PostgreSQL, Redis, Docker, OpenRouter, Claude API

MUSHROOMSOFT-IT, Quito, Ecuador
Jun. 2023 – Jan. 2024

Full Stack Developer

- Developed backend services for a micro-frontend architecture (NestJS + Angular), reducing load times by ~25% via PostgreSQL indexing and query optimization.
- Designed data models in PostgreSQL and MongoDB for a system with 50k+ active records.
- Containerized applications with Docker, standardizing environments and eliminating configuration incidents across the team.
- Led weekly code reviews, establishing quality standards adopted by a team of 5 developers.

Technologies: NestJS, Angular, PostgreSQL, MongoDB, Docker

ZGAMESLATAM, Manta, Ecuador
Jun. 2022 – Jun. 2023

Full Stack Developer

- Designed and implemented REST APIs in Node.js for an internal ERP system processing ~200 daily transactions, improving data consistency across modules.
- Optimized NGINX server configuration, achieving ~20% reduction in average latency.
- Managed deployments on AWS and DigitalOcean for a team of 4.

Technologies: Node.js, Angular, AWS, DigitalOcean, NGINX

CONSULTI, Guayaquil, Ecuador
Sep. 2020 – Jun. 2022

Junior Full Stack Developer

- Developed backend APIs in Node.js and Spring Boot for an e-commerce platform with 5,000+ products and multiple integrated payment methods.
- Deployed applications on AWS and DigitalOcean using Docker and NGINX, reducing deploy time by ~40%.
- Applied clean code and Scrum in a team of 6, consistently meeting delivery deadlines.

Technologies: Node.js, Spring Boot, Docker, AWS, NGINX

EDUCATION

Universidad Laica "Eloy Alfaro" de Manabí, Manta, Ecuador
2014 – 2021

BS, Systems Engineering

LANGUAGES

Spanish (native — C2) | English (advanced — C1)
